

## Unique chemistries for multi-metal processes

PTS provides unique chemistries for multi-metal processes that is the latest generation of phosphating options and replacements. Our diverse

chemistry knowledge and partnerships with international companies has helped make PTS a technological leader of metal pre-treatment in industries

ranging from aerospace to architectural applications.

The **PHOS PREP** line of products serve as the backbone chemistry for many applications. **PHOS PREP PP 971T** is an ambient or low temperature, no sludge alternative to iron and zinc phosphates. It's ability to work on iron, steel and various forms of aluminium (and other metals) makes it a perfect cost efficient and ecological answer to the ever-growing waste disposal issues of today.

In addition Pre Treatment Solutions offers **PHOS PREP PP 920** – dry in place process for architectural aluminium and multi metal applications with excellent performance

results exceeding the requirements of chrome based process on a regular basis.

**PHOS PREP PP 983LC** – laser removal and iron phosphate process all achieved in one process, eliminates the edge damage to powder coated laser cut profiles.

If you require good sound technical advice / service / reliable process solutions then give Pre Treatments Solutions a call NOW to solve all those daily headaches that slow down productivity.

*PHOS PREP for reliable solutions to today's problems.*
